Do you want to learn how to trade bitcoin and altcoins? Do you want to identify top-performing cryptocurrencies and understand why you need to be investing and trading digital currencies right now? If yes, then keep reading Cryptocurrency is a disruptive concept used in the current monetary system as an alternative to fiat currency. Entrepreneurs, startups, and large as well as small and medium-sized enterprises (SMEs) take an interest in cryptocurrencies and consider them a groundbreaking tool to combat transactional compliances. Because of these reasons, the ecosystem has attracted vast venture funding, alliances, and partnerships among vendors of cryptocurrency solutions to provide end-to-end solutions. Plenty of people invest in building payment gateways and websites for their currencies. When a customer makes a purchase using a cryptocurrency as payment, the transaction often passes a fixed exchange rate through the payment gateway. It translates immediately to commonly accepted fiat currency so that the merchant can escape the cryptocurrency market instability. Cryptocurrency payment has several advantages, such as improved transactional security, fraud protection, decentralized framework, low fees, customer chargeback protection, and rapid international transfers. Throughout history, we've used different mediums of exchange like commodity money, paper money, gold standard, fiat currencies etc. Different scientific communities across the world have been dissatisfied with the short-comings of these traditional currencies. Due to the explosion of internet and progress made in the fields of cryptography, online security, and digital payments, it became possible to have a decentralized currency that could void the necessity of a central bank or government. The first modern cryptocurrency to emerge that is effective and used widely is Bitcoin. A white-paper explaining the details of bitcoin implementation was first published under the pseudo-name of Satoshi Nakamoto in October 2008. The paper is titled "Bitcoin: A Peer-to-Peer Electronic Cash System" and can be downloaded at [www.bitcoin.org/bitcoin.pdf](http://www.bitcoin.org/bitcoin.pdf). On January 2009, Satoshi released the initial version of the bitcoin software on SourceForge.net, opening the technology up to the public. "We're going to raise traders just like they raise turtles in Singapore." So trading guru Richard Dennis reportedly said to his long-time friend William Eckhardt nearly 25 years ago. What started as a bet about whether great traders were born or made became a legendary trading experiment that, until now, has never been told in its entirety. Way of the Turtle reveals, for the first time, the reasons for the success of the secretive trading system used by the group known as the "Turtles." Top-earning Turtle Curtis Faith lays bare the entire experiment, explaining how it was possible for Dennis and Eckhardt to recruit 23 ordinary people from all walks of life and train them to be extraordinary traders in just two weeks. Only nineteen years old at the time-the youngest Turtle by far-Faith traded the largest account, making more than \$30 million in just over four years. He takes you behind the scenes of the Turtle selection process and behind closed doors where the Turtles learned the lucrative trading strategies that enabled them to earn an average return of over 80 percent per year and profits of more than \$100 million. You'll discover How the Turtles made money-the principles that guided their trading and the step-by-step methods they followed Why, even though they used the same approach, some Turtles were more successful than others How to look beyond the rules as the Turtles implemented them to find core strategies that work for any tradable market How to apply the Turtle Way to your own trades-and in your own life Ways to diversify your trading and limit your exposure to risk Offering his unique perspective on the experience, Faith explains why the Turtle Way works in modern markets, and shares hard-earned wisdom on taking risks, choosing your own path, and learning from your mistakes.

HOW TO TRADE CRYPTOCURRENCY - FOR BEGINNERS A Beginner's Guide To Cryptocurrency Trading (Bitcoin, Ether And More). As traders, our job is to take advantage of opportunities in the markets. Sometimes, these opportunities come in the form of entirely new markets. I've been interested in cryptocurrencies for a few years now, but I've been very reluctant to trade them, much less write about trading them. I felt that there was just too much risk. Especially for the average trader. and quite frankly, I didn't understand them well enough myself. The first time that I saw them as viable for trading was when I went to this conference. I saw Chris Dunn talk about trading Bitcoin, but I was still skeptical that it would stay around for the long-term until recently. I credit my friend for talking to me about it on Twitter and opening my eyes to the potential in trading this emerging market. I'm not sure if he wants to be named, but you know who you are. I sincerely appreciate the education and helping me see the light! This is a perfect example of the benefit of staying in touch with other traders on platforms like Twitter. Anyway, as I have done more research and have actually started trading them, I have found that there are tremendous opportunities. With some coins, it's potentially like being able to get pre-IPO shares of Microsoft. But there are also big risks. Remember, the dot-com bust? There will probably be losses of that magnitude too. That's just how these new technologies work. So in this book, I want to share with you my knowledge of the cryptocurrency markets and give you a total beginner's guide to trading them. For you crypto veterans, this will be very simplified, but my goal is to make this information as easy to understand as possible so new traders can make an informed decision about the opportunities. Once people get the general concepts, then they can geek out about the details. This is the future of FX trading. So in addition to USD/CHF, CAD/JPY, and EUR/GBP, we also need to be aware of XLM/USD, ETH/BTC, and XRP/LTC CLICK THE "BUY" BUTTON.to know more!!

cryptocurrencies and how to trade and invest them properly for the most profitable outcomes. Let me give you an example using one of my personal favorite cryptocurrencies, Litecoin. On March 20, 2017, 1 Litecoin was worth exactly \$3.96. Just a mere 5 and 1/2 months later in September, Litecoin was worth \$81.78. That is a 1,965% increase in less than 6 months. And it's not like this huge jump came completely out of the blue. Many skilled investors who were involved with and studied cryptocurrencies saw this coming, and everyone who did benefited massively from it. A realistic and relatively small investment of \$5,000 back in March of 2017, would be worth nearly \$100,000 just 6 months later. This is the kind of potential we are dealing with when investing in cryptocurrencies. This is not what you should expect once you begin investing, but it is a possibility. You should also be focused on the long term instead of trying to get rich quick as that very rarely works out the way you want it to. No doubt you will have seen or heard about the fervour that surrounded cryptocurrencies in 2017, and many of you may have dismissed them as a legitimate asset class; many may have felt a quiet interest but a looming fear; others undoubtedly felt drawn towards the allure of cryptocurrencies and altcoins (and any of the other innumerable names) yet lacked the framework required to tame this volatile and novel market. To you, I present An Altcoin Trader's Handbook: The exponential growth of the cryptosphere over the previous half-decade has brought with it a plethora of life-changing speculative opportunities. Where traditional financial markets seem inaccessible and ineffectual due to the prevalence of high fees and low returns, the emergence of a worldwide market of decentralised alternatives to Bitcoin allows for those unable (or unwilling) to navigate the often-slippery world of hedge funds and investment banks the chance to realise financial freedom. This, of course, is no effortless journey, and this book does not profess to be a get-rich-quick scheme of any sort. Bitcoin is the most widespread cryptocurrency in the world, created in 2009 by Satoshi Nakamoto, a pseudonym that many consider hiding a group of subjects who gave life to this currency. The main feature is the absence of a central authority that monitors, controls, influences and determines the circulation of this virtual currency. The system on which it is based is peer To peer, the same used for the exchange of files between users all over the world. Unlike most traditional currencies, Bitcoin does not use a Central network or sophisticated financial mechanisms and its value is solely given by supply and demand. To trace transactions, Bitcoin uses a database distributed among the nodes of the network, so it is a peer to peer and uses cryptography to manage functional aspects such as the generation of new money and the attribution of property. The Bitcoin network allows the anonymous possession and transfer of coins, the data necessary to use their own Bitcoins can be saved on their computers or electronic devices in the form of a digital wallet or they can be maintained by third parties that perform a function similar to that of a bank. Bitcoins can be transferred over the internet to anyone with a Bitcoin address, also called a wallet. The decentralized structure of the Bitcoin network and therefore the lack of a central body makes it impossible for any authority, any government, the blocking of transfers, the seizure of Bitcoins without the possession of the related private keys, or even the devaluation due to the entry of new currency. In order to stop using the same coin twice its creator Satoshi Nakamoto has developed a server-based opening time marking system that assigns sequential identifiers to each of the transactions that are then strengthened against change attempts using the idea of a chain of proof-of-work that is of successive confirmations. Each time a transaction is made, this part from the unconfirmed state will only be confirmed when it is verified through a collectively managed time stamp list of all known transactions, the chain of blocks or blockchain. So It's a real revolution!
